California Mineral Production in 1961

by FENELON F. DAVIS

The value of mineral production in California during 1961 increased for the first time in 4 years. Mineral output from all wells, mines, pits and quarries in the state was reported and classified under fuels, industrial minerals or metals, and totalled \$1,423,507,000. This was an increase of 1 percent from the figure of \$1,404,733,000 (revised) reported for 1960. The compilation of the 1961 mineral production on a county-wide basis has now been completed by the Division of Mines and Geology in co-operation with U.S. Bureau of Mines and the Division of Oil and Gas and is presented in the following pages.
